

# Heroes Senior Softball Website Framework

## Website Overview

**Organization:** Heroes Senior Softball

**Primary Website:** [www.heroesseniorsoftball.com](http://www.heroesseniorsoftball.com)

Heroes Senior Softball will operate as **one organization website** that supports multiple teams under a single brand. The platform must serve three core purposes:

1. **Organization Website** – public-facing site for branding, team visibility, news, sponsors, and contact information.
  2. **Historical Player Database** – five-year player history with searchable stats, team history, and player profiles.
  3. **Team Operations Platform** – schedules, results, tournament event management, player availability, and admin stat entry.
- 

## Organization Structure

The organization includes three teams:

- **55's AAA**
- **50's AAA**
- **50's AA**

Each team must have its own:

- roster
- schedule
- game history
- record
- offense stats
- pitching stats

At the same time, players must be able to:

- belong to the organization as one master profile
  - appear on multiple team rosters
  - be used by multiple teams as needed
  - retain one historical player record across all years and teams
-

# Core Platform Principles

## 1. One Website, One Organization

The website should present Heroes Senior Softball as the main brand, with the three teams managed underneath the organization rather than as separate sites.

## 2. Player-First Historical Database

Players are the primary entity. Team records and team stats are generated from player and game data, not the other way around.

## 3. Game-Level Data Entry

All stats must be entered at the **game level**. Season totals, player totals, team totals, career totals, and historical opponent records should all be calculated from game records in the database.

## 4. Season + Date Range Filtering

Stats must support:

- overall career totals
- single-year totals
- multi-year totals
- custom calendar date range reporting

---

## Main Website Navigation

Recommended main navigation:

- Home
- About Heroes Senior Softball
- Teams
- 55's AAA
- 50's AAA
- 50's AA
- Players
- Stats
- Schedules
- Tournaments
- Availability
- News / Updates
- Sponsors
- Contact
- Admin Login

---

## Sitemap / Page Framework

### 1. Home Page

#### Purpose

Provide a professional landing page for Heroes Senior Softball and direct visitors into team pages, player history, schedules, and news.

#### Content Sections

- Hero banner with organization name/logo
- Organization intro statement
- Team cards for 55's AAA, 50's AAA, 50's AA
- Latest results
- Upcoming games / tournaments
- Featured players
- All-time leaders snapshot
- News / announcements
- Sponsor section
- Contact / social links

#### Suggested Homepage Messaging

Heroes Senior Softball is a multi-team senior men's softball organization featuring competitive 55's AAA, 50's AAA, and 50's AA teams. The organization tracks player history, team performance, tournament schedules, and player availability across multiple seasons.

---

### 2. About Page

#### Purpose

Explain the mission and history of Heroes Senior Softball.

#### Content

- organization story
  - mission and values
  - leadership / coaches / managers
  - how teams are structured
  - player movement between teams
  - expectations / culture
  - contact info
-

### 3. Team Pages

Create separate pages for:

- 55's AAA
- 50's AAA
- 50's AA

#### Each Team Page Should Include

- team name and classification
- coach / manager
- current record
- current roster
- schedule
- results
- team offense stats
- team pitching stats
- latest news
- upcoming events
- historical archive links by year
- opponent record summary

#### Team Page Tabs / Sections

- Overview
  - Roster
  - Schedule
  - Results
  - Offense Stats
  - Pitching Stats
  - Team History
- 

### 4. Player Directory Page

#### Purpose

Provide a searchable list of all Heroes players across the organization.

#### Features

- searchable by name
- filter by team
- filter by age division
- filter by years with Heroes
- filter by active vs former players

- optional filter by position

## **Display Options**

- player photo
  - full name
  - jersey number
  - primary position
  - years with Heroes
  - profile link
- 

## **5. Player Profile Page**

### **Purpose**

Serve as the master historical profile for each player.

### **Player Profile – Required Fields**

#### **Public / Display Fields**

- full name
- player photo
- jersey number
- primary position(s)
- bats / throws
- years with Heroes
- hometown (optional)

#### **Private / Admin-Only Fields**

- email
- address

### **Statistical Sections**

#### **Career Summary**

- AB
- H
- 1B
- 2B
- 3B
- HR
- HBP
- K
- BB

- SF
- AVG
- OBP
- SLG

### **Team History**

- list of teams played for
- years on each team

### **Year-by-Year Stats Table**

- year
- team
- classification
- jersey number if needed by season
- AB
- H
- 1B
- 2B
- 3B
- HR
- HBP
- K
- BB
- SF
- AVG
- OBP
- SLG

### **Optional Additional Sections**

- player bio
- achievements
- tournament appearances
- availability history / attendance rate

### **Filters on Player Page**

- all-time / career
  - by team
  - by season
  - by calendar date range
-

## 6. Stats Center

### Purpose

Provide a central stats hub for players, teams, and historical leaderboards.

### Core Stat Filters

- all teams / single team
- all years / single year / year range
- custom date range
- tournament only / all games

### Hitting Stats Fields

#### Raw Input Fields

- AB
- H
- 1B
- 2B
- 3B
- HR
- HBP
- K
- BB
- SF

#### Calculated Fields

- $AVG = H / AB$
- $OBP = (H + BB + HBP) / (AB + BB + HBP + SF)$
- $SLG = (1B + 2 \times 2B + 3 \times 3B + 4 \times HR) / AB$

### Optional Add-On

- $OPS = OBP + SLG$

### Stats Center Sections

- player leaders
  - team leaders
  - all-time leaders
  - single-season leaders
  - team-vs-opponent performance
-

## 7. Schedules Page

### Purpose

Display upcoming and historical games across the organization.

### Main Schedule Table Fields

- date
- team
- opponent
- event / tournament
- location
- game status
- result
- final score
- link to game details

### Filters

- team
  - season
  - completed / upcoming
  - tournament
  - opponent
- 

## 8. Game Detail Page

### Purpose

Provide the full historical record for a specific completed game.

### Content

- date
- team
- opponent
- location
- tournament / event
- final score
- win / loss / tie result
- team totals
- player hitting stats
- player pitching stats
- notes if needed

## **Database Importance**

Each completed game becomes a historical record that feeds all player stats, team stats, season stats, and opponent records.

---

## **9. Opponent History Page / Module**

### **Purpose**

Track overall history against each opponent.

### **Opponent Summary Should Include**

- opponent name
- overall record vs that opponent
- runs scored
- runs allowed
- first meeting
- most recent meeting
- game history list

### **Use Cases**

- show on team pages
  - show in stats center
  - show on schedule/results pages
- 

## **10. Tournaments Page**

### **Purpose**

List all tournament / event schedules for the organization.

### **Tournament Content**

- event name
- dates
- location
- assigned team
- schedule if available
- hotel / notes
- eligible players
- availability summary
- final roster if selected

---

## 11. Tournament Event Detail Page

### Purpose

Manage player availability and event participation.

### Event Detail Content

- tournament name
- dates
- location
- team assigned
- game schedule if known
- notes / logistics
- player availability section
- available / maybe / out summary
- final roster section

### Player Availability Function

Each eligible player should be able to respond with:

- In / Available
- Out / Not Available
- Maybe

### Optional Fields

- notes
- arrival time
- departure time

### Manager Tools

- view all responses
- update responses if necessary
- lock event roster
- export event roster

---

## 12. Availability Page

### Purpose

Provide a broader organization-level view of player availability across upcoming events.

## **Potential Views**

- player availability by event
  - upcoming event response status
  - coach dashboard by team
  - availability summary counts
- 

## **13. News / Updates Page**

### **Purpose**

Post organization updates, team updates, tournament recaps, and announcements.

### **Content Types**

- game recaps
  - tournament announcements
  - player spotlights
  - roster changes
  - sponsor announcements
  - organization news
- 

## **14. Sponsors Page**

### **Purpose**

Recognize sponsor partners and support fundraising / credibility.

### **Content**

- sponsor logos
  - sponsor descriptions
  - sponsor tiers
  - contact to become a sponsor
- 

## **15. Contact Page**

### **Purpose**

Provide a place for inquiries.

## **Content**

- general contact form
  - organization contact info
  - coach / manager contact if desired
  - social media links
- 

## **16. Admin Dashboard**

### **Purpose**

Allow internal users to manage players, teams, games, schedules, tournaments, and stats.

### **Admin Roles**

#### **Admin**

- full control across site

#### **Coach / Manager**

- manage own team
- manage event responses
- enter or edit game scores and stats

#### **Player**

- update availability
  - view own profile (optional deeper access)
- 

## **Admin Functional Modules**

### **A. Player Management**

- create player
- edit player
- upload player photo
- set jersey number
- set years with Heroes
- assign to team(s)
- mark active / inactive
- manage private contact info

## **B. Team Management**

- create / edit team pages
- update coaches
- maintain roster assignments by season

## **C. Schedule / Game Management**

- create game
- edit game
- mark game status (scheduled, completed, cancelled)
- enter final score
- link game to tournament/event

## **D. Game Stat Entry**

For completed games, admin can enter:

### **Hitting Stats Per Player**

- AB
- H
- 1B
- 2B
- 3B
- HR
- HBP
- K
- BB
- SF

### **Pitching Stats Per Player**

Recommended structure:

- appearances
- innings pitched
- hits allowed
- runs allowed
- earned runs
- BB allowed
- K
- win/loss/save decision

## Save Behavior

When saved, the system updates:

- player totals
- team totals
- season totals
- historical opponent records
- all-time leaderboards

## E. Tournament/Event Management

- create event
  - assign team
  - assign eligible players
  - open availability responses
  - close / lock availability
  - create final roster
- 

## Database Framework

### Core Data Entities

#### 1. Organization

- organization\_id
- organization\_name
- website
- logo
- contact information

#### 2. Teams

- team\_id
- team\_name
- age\_group
- classification
- coach / manager
- active\_status

#### 3. Players

- player\_id
- first\_name
- last\_name
- photo

- jersey\_number
- primary\_position
- bats\_throws
- years\_with\_heroes
- email
- address
- active\_status

#### **4. Seasons**

- season\_id
- year
- start\_date
- end\_date

#### **5. Team Rosters**

Connects player to team by season.

- roster\_id
- player\_id
- team\_id
- season\_id
- active\_roster\_status

#### **6. Opponents**

- opponent\_id
- opponent\_name
- classification
- city\_state optional

#### **7. Games**

- game\_id
- date
- team\_id
- opponent\_id
- season\_id
- event\_id optional
- location
- status
- team\_score
- opponent\_score
- result

#### **8. Player Game Hitting Stats**

- stat\_id

- game\_id
- player\_id
- team\_id
- season\_id
- AB
- H
- 1B
- 2B
- 3B
- HR
- HBP
- K
- BB
- SF

## 9. Player Game Pitching Stats

- stat\_id
- game\_id
- player\_id
- team\_id
- season\_id
- appearances
- innings\_pitched
- hits\_allowed
- runs\_allowed
- earned\_runs
- BB\_allowed
- K
- decision

## 10. Events / Tournaments

- event\_id
- event\_name
- team\_id
- season\_id
- start\_date
- end\_date
- location
- notes

## 11. Event Availability

- availability\_id
- event\_id
- player\_id
- status (available / out / maybe)

- notes
  - timestamp
- 

## Calculation Logic

### Hitting Validation Rule

H must equal:

- $1B + 2B + 3B + HR$

### Player Career Totals

Aggregate from all player game stats records across all teams and seasons.

### Team Totals

Aggregate all player game stats tied to that team and time range.

### Opponent Records

Aggregate all games vs the same opponent.

### Filter Logic Must Support

- player + all years
  - player + selected season
  - player + selected team
  - player + custom date range
  - team + season
  - organization-wide leaderboard by date range
- 

## User Workflows

### 1. Public Visitor Workflow

- lands on homepage
- views teams, schedules, stats, and news
- browses player profiles
- sees records and history

### 2. Player Workflow

- logs in

- views upcoming tournament events
- marks availability as in / out / maybe
- optionally updates own profile details if allowed

### **3. Coach / Manager Workflow**

- logs in
- reviews upcoming events
- checks availability responses
- creates final roster
- reviews schedules and stats
- enters game scores and player stats after games

### **4. Admin Workflow**

- manages all content and users
- creates players, teams, games, and events
- updates organization pages
- audits stats and records

---

## **Recommended Filters Across the Website**

Use consistent filters across stats, schedules, and reports:

- team
- season / year
- custom date range
- opponent
- tournament/event
- active/inactive player

---

## **Search / Reporting Features**

### **Searchable Areas**

- player directory
- schedules / results
- opponents
- tournaments

### **Reports to Consider**

- all-time leaders
- single season leaders

- record vs opponents
  - tournament attendance
  - player participation history
- 

## Privacy / Permissions

### Public Information

- player name
- player photo
- jersey number
- position
- years with Heroes
- stats
- team history

### Private Information

- email
- address
- internal notes

### Permissions

- public: read public content
  - player: update availability only unless expanded later
  - coach/manager: manage team data and events
  - admin: full control
- 

## Design Recommendations

### Style Direction

- athletic / sports organization feel
- bold headers
- team cards
- leaderboard blocks
- clean tables for stats and schedules
- mobile-friendly buttons for player availability

### UX Priorities

- mobile optimized for players
- simple stat filters
- fast access to schedules and tournament events

- easy admin stat entry
- 

## Build Phases

### Phase 1 – Foundation

- homepage
- about page
- team pages
- player directory
- player profile framework
- basic schedule pages

### Phase 2 – Historical Stats Engine

- import five years of player/game data
- build filters for season and date range
- build all-time and yearly leaderboards

### Phase 3 – Tournament Operations

- tournament pages
- player availability system
- manager event dashboard
- final roster tools

### Phase 4 – Advanced Reporting

- opponent history pages
  - participation reports
  - deeper leaderboards
  - enhanced admin analytics
- 

## Final Definition of the Project

Heroes Senior Softball is building a **single-organization senior softball platform** that combines:

- organization branding
- team management
- five-year player history
- stats and records
- game database
- tournament operations

- player availability tracking

The website must be designed so that all team records and player history are driven from one connected database, making the platform scalable, accurate, and valuable for years to come.

---

# WordPress Build Plan for HeroesSeniorSoftball.com

## Recommended Platform Choice

Use **WordPress** as the main website platform because it gives Heroes Senior Softball the best balance of:

- flexibility
- lower cost
- admin-friendly editing
- plugin support
- future scalability

This project is not just a brochure website. It needs:

- team pages
- player profiles
- historical stats
- tournament/event pages
- player availability responses
- admin stat entry
- searchable records

Because of that, the best setup is:

## Core Stack

- **Website Platform:** WordPress
  - **Theme Builder:** Bricks Builder or Elementor Pro
  - **Custom Fields / Database Layer:** Advanced Custom Fields Pro (ACF Pro)
  - **Custom Post Types:** CPT UI or built into ACF / code
  - **Tables / Stats Display:** wpDataTables or Ninja Tables
  - **Forms / Admin Entry:** Gravity Forms or Fluent Forms Pro
  - **Search / Filtering:** FacetWP or Search & Filter Pro
  - **Membership / Login:** MemberPress or Ultimate Member
  - **Calendar / Events:** The Events Calendar or custom event post type
  - **Permissions / Role Control:** Members plugin
  - **Optional Database / App Layer Expansion:** JetEngine or WP Grid Builder
-

## Best Version of the WordPress Stack

### Option A – Recommended Build Stack

This is the most balanced setup for speed and flexibility:

- WordPress
- Bricks Builder
- ACF Pro
- CPT UI
- Gravity Forms
- wpDataTables
- FacetWP
- Members plugin
- The Events Calendar (or custom event type)

### Why this setup works

- Bricks Builder gives strong design control
  - ACF Pro handles all custom data fields cleanly
  - CPT UI makes it easy to structure players, teams, games, and events
  - Gravity Forms helps with admin stat entry and player availability forms
  - wpDataTables displays stats and records professionally
  - FacetWP gives strong filtering for players, schedules, and stats
  - Members plugin controls public/player/coach/admin access
- 

## Website Architecture in WordPress

### Core Custom Post Types

Create these main content types:

#### 1. Teams

Use for:

- 55's AAA
- 50's AAA
- 50's AA

Fields:

- team name
- age group
- classification

- coach/manager
- team photo
- current record
- season

## 2. Players

Use one master player profile per player.

Fields:

- full name
- player photo
- jersey number
- primary position
- bats / throws
- years with Heroes
- email (private)
- address (private)
- active / inactive

## 3. Games

Each game is its own post / record.

Fields:

- game date
- team
- opponent
- event / tournament
- location
- status
- final score
- result
- season

## 4. Opponents

Use a separate opponent post type or taxonomy.

Fields:

- opponent name
- classification
- city/state

## 5. Events / Tournaments

Fields:

- event name
- start date
- end date
- location
- assigned team
- notes
- season

## 6. News / Updates

Standard WordPress posts.

---

## Recommended Taxonomies

### Team Classification

- AAA
- AA

### Age Group

- 55's
- 50's

### Season

- 2021
- 2022
- 2023
- 2024
- 2025
- 2026 and beyond

### Player Status

- active
  - inactive
  - former
-

## Key Relationships to Build

This is the most important technical part.

### Player Relationships

A player must be able to:

- belong to one main player profile
- appear on multiple teams
- have data across multiple seasons

### Required relationships

- players ↔ teams
- players ↔ seasons
- games ↔ teams
- games ↔ opponents
- games ↔ events
- event availability ↔ players

You can handle these relationships with:

- ACF relationship fields
  - JetEngine relations
  - custom database tables if the build becomes more advanced
- 

## How to Handle Stats in WordPress

This is where most builds go wrong.

**Do not store only summary stats on the player page.**

Instead:

- store game records
- store player stat lines tied to games
- display totals by aggregation/filtering

### Recommended practical approach in WordPress

For an MVP, use:

- a **Game** post type for each game
- a connected stats table using **wpDataTables** or a custom database table

## Best data structure for stats

Use either:

### Option 1 – Easier / Faster MVP

Create a stat entry form in Gravity Forms for each completed game, with repeating player stat rows. Store the entries in Gravity Forms and expose them through wpDataTables.

### Option 2 – Better Long-Term

Use custom database tables for:

- player hitting game stats
- player pitching game stats

This is better if you want clean reporting, filters, and future scaling.

## My recommendation

For Heroes Senior Softball:

- start with WordPress front-end
- use **custom tables** for stats if possible
- use Gravity Forms only for entry interface

That gives you:

- easier admin entry
- cleaner long-term reporting
- better date-range filtering

---

## Player Availability System Setup

### Best WordPress Method

Use:

- custom post type: Events/Tournaments
- Gravity Forms or Fluent Forms for availability response
- logged-in player account tied to player profile

Each player should be able to choose:

- In
- Out

- Maybe

Store:

- player
- event
- status
- notes
- timestamp

## Display on event page

Use a table showing:

- player name
- status
- notes

Managers should be able to:

- view all responses
- edit responses if necessary
- finalize roster

---

## Recommended User Roles

Use **Members** plugin or User Role Editor.

### Roles

#### Public Visitor

- view public pages

#### Player

- log in
- update availability
- optionally view private player-only content

#### Coach / Manager

- view team management screens
- edit games
- enter scores
- enter stats
- review availability

## Admin

- full control
- 

## Page-by-Page Build Setup

### 1. Homepage

Build with Bricks or Elementor.

Sections:

- hero banner
- team cards
- latest results
- upcoming events
- featured players
- leaderboard snapshot
- sponsors

### 2. Team Pages

Dynamic templates pulling:

- team info
- roster
- schedule
- results
- filtered stats table

### 3. Player Directory

Use FacetWP to filter by:

- team
- years with Heroes
- position
- active/inactive

### 4. Player Profile Template

Dynamic player template showing:

- bio card
- photo

- jersey number
- years with Heroes
- career stats
- yearly stats table
- team history

## 5. Schedule / Results Page

Use tables with filters:

- team
- season
- opponent
- event
- upcoming/completed

## 6. Event / Tournament Page

Dynamic page showing:

- tournament details
- assigned team
- notes
- availability response table
- response buttons/form

## 7. Stats Center

Use wpDataTables with filters for:

- player
- team
- season
- custom date range

---

## Plugin / Tool List

### Required Plugins

- WordPress
- Bricks Builder or Elementor Pro
- ACF Pro
- CPT UI
- Gravity Forms or Fluent Forms Pro
- wpDataTables

- FacetWP
- Members plugin

### **Likely Helpful Plugins**

- The Events Calendar
- WP Mail SMTP
- UpdraftPlus backup
- Yoast SEO or Rank Math
- WP Rocket or LiteSpeed Cache
- Imagify or ShortPixel

### **If you want stronger relational data**

- JetEngine
  - WP Grid Builder
- 

## **Hosting Recommendation**

Use solid managed WordPress hosting.

Recommended options:

- WP Engine
- SiteGround
- Rocket.net
- Kinsta

For this project, choose hosting that supports:

- strong database performance
  - backups
  - staging site
  - SSL
- 

## **Build Order for HeroesSeniorSoftball.com**

### **Phase 1 – Brand and Public Website**

- install WordPress
- set theme/builder
- build homepage
- build about page
- build contact page

- build sponsor page

## **Phase 2 – Team and Player Structure**

- create custom post types
- create player fields
- create team fields
- build player directory
- build player profile template
- build team page template

## **Phase 3 – Schedule and Games**

- create games post type
- create opponent structure
- build schedule/results tables
- build game detail template

## **Phase 4 – Stats Engine**

- create hitting and pitching stat storage
- build stat entry form
- build player totals
- build team totals
- build leaderboards
- add season/date range filtering

## **Phase 5 – Tournament Operations**

- create event/tournament post type
- build player login access
- build availability form
- build manager availability dashboard
- build final roster workflow

## **Phase 6 – Polish and Scale**

- improve mobile UX
  - add search and filters
  - optimize speed
  - add archive pages by season
  - add opponent history pages
-

## MVP Recommendation

If you want to launch faster, do this first:

### MVP Version

- homepage
- 3 team pages
- player directory
- player profile pages
- schedule/results page
- tournament page with availability

Then add:

- advanced stats
- historical leaderboards
- opponent history
- deeper admin tools

---

## Exact Recommendation for a Developer or Builder

Build HeroesSeniorSoftball.com in WordPress using a dynamic content structure.

Use WordPress as the CMS, Bricks Builder for layout, ACF Pro for custom fields, custom post types for Teams, Players, Games, Opponents, and Events, wpDataTables for stats display, Gravity Forms for admin stat input and player availability, FacetWP for filtering, and Members for role-based access.

Players must exist as one master profile and be usable across multiple teams. Stats must roll up from game-level records, not manual player totals. Tournament pages must support logged-in availability responses from players and dashboard visibility for coaches/managers.

The build should prioritize mobile use, easy admin updates, and future expansion.

---

## AI WEBSITE BUILDER STARTER DOCUMENT (COPY/PASTE READY)

Use the following as a direct instruction prompt for an AI website builder or development platform.

---

## Project Name

Heroes Senior Softball Website & Player Management Platform

## Project Goal

Build a professional website for a senior men's softball organization that supports:

- multiple teams under one organization
  - player profiles with 5-year historical stats
  - team schedules and results
  - game-by-game stat entry
  - tournament event management
  - player availability tracking
- 

## Core Structure Requirements

### Organization Model

- One organization: Heroes Senior Softball
- Three teams:
  - 55's AAA
  - 50's AAA
  - 50's AA

Players must be able to:

- exist as one master profile
  - play on multiple teams
  - retain full historical stats across all teams and years
- 

## Required Pages

### 1. Homepage

- organization overview
- team summary cards
- latest results
- upcoming schedule
- featured players
- news section

## **2. Team Pages (3 total)**

Each team page must include:

- roster
- schedule
- results
- team stats
- record

## **3. Player Directory**

- searchable list of all players
- filters: team, position, years with organization

## **4. Player Profile Page**

Each player profile must include:

- name
- photo
- jersey number
- position
- bats/throws
- years with organization

Stats must include:

- AB, H, 1B, 2B, 3B, HR, HBP, K, BB, SF
- AVG, OBP, SLG (calculated)

Must support filters:

- all-time
- by year
- by team
- custom date range

## **5. Schedule Page**

- list all games
- show date, team, opponent, result, score
- filter by team and season

## **6. Game Detail Page**

- full box score
- player stats for that game
- final score and result

## 7. Stats Page

- player leaderboards
- team stats
- all-time stats
- filters for date range and season

## 8. Tournament / Event Page

- event name, date, location
- assigned team
- player availability section

## 9. Availability System

Each player can mark:

- Available
  - Not Available
  - Maybe
- 

# Admin Requirements

## Admin Dashboard Must Allow:

### Player Management

- create/edit players
- upload photos
- assign jersey numbers

### Game Management

- create/edit games
- enter final scores

### Stat Entry

For each completed game:

- enter player hitting stats
- enter player pitching stats

### Event Management

- create tournaments
- track player availability

- view responses
- 

## Database Rules

### CRITICAL:

All stats must be stored at the **game level**.

The system must:

- calculate player totals automatically
  - calculate team totals automatically
  - calculate opponent records automatically
- 

## Stat Formulas

$AVG = H / AB$

$OBP = (H + BB + HBP) / (AB + BB + HBP + SF)$

$SLG = (1B + 2 \times 2B + 3 \times 3B + 4 \times HR) / AB$

---

## Key Features

- Multi-team player usage
  - Historical stats (5+ years)
  - Game-by-game stat tracking
  - Tournament availability tracking
  - Opponent history tracking
  - Mobile-friendly design for players
- 

## Design Style

- sports organization feel
  - clean stat tables
  - bold team sections
  - mobile-first for player interaction
-

## Final Instruction to Builder

Build a scalable sports organization platform where:

- players are the primary data object
- teams are secondary containers
- stats are generated from game-level data

The system must support long-term historical tracking and future expansion.
